ELMO 101: Learn about a tool for real time quantitative and qualitative data collection and analysis for your field research

Thursday, November 14, 2019 | 3:00pm-4:30pm
Robert W. Woodruff Library, Room 314, Emory University

ELMO is an open-source data collection and reporting system designed for use with tablet, SMS or online that is available to Emory faculty and students. Developed by The Carter Center for field research on elections, conflict, human rights, and health in volatile environments, ELMO can be adapted for research in many disciplines to make your quantitative and qualitative data gathering and analysis increasingly simple, immediate, efficient and powerful.

This event will provide a general overview of ELMO and its main features for students and faculty interested in applying ELMO to their project.

Join us for an introduction to ELMO and learn more about how you can use this tool for your research project in the field of humanities, social sciences, public health, and others.
